Supplementary evaluations***	From 60.000 NOK
Special requests	

**Ratio variables* are read on a *ratio scale*; a scale of measurement of data having a fixed zero value, which permits the quantitative comparison of differences of the values.

***Ordinal variables* are read on an *ordinal scale*; a scale allowing for a rank order (positive/negative, 1st, 2nd, 3rd, etc.) by which data can be sorted, but still does not allow for relative *degree of difference* between them (eg. Strep A test results, urine test strip results).

*** Based on a previous SKUP evaluation SKUP offers supplementary evaluations of product modifications and new models
